Concepts Of Developmental Biology Dr. Rajesh Verma, Mrs. Parameswari Jagari, Dr. Anant S. Deshpande, Dr. Biplab Kumar Das, 2023-01-25 The concept of Developmental Biology is the study of how animals and plants grow and develop. Developmental biology also includes the study of regeneration, asexual reproduction, metamorphosis, and the development and differentiation of stem cells in adult organisms. The concept of developmental biology encompasses all facets of development, including the genes and molecular processes that direct growth as well as the structural alterations that an organism experiences as it grows. They investigate a wide range of developmental processes, from animal and plant embryogenesis to the aggregation of slime mould amoebae, blooming plants, and limb regeneration in salamanders. Developmental biologists, like historians, construct causal relationships between events, sorting out the temporal order of processes that result in morphological and functional changes throughout the span of an organism's lifetime. This book covers a wide range of topics under the umbrella concept of developmental biology. from embryonic differentiation and the epigenetic landscape through blastogenesis, cleavage, and gastrulation in the context of early embryonic development. In addition, this book delves into the many facets of gametogenesis and fertilisation, as well as the development of plants and fungi, with a focus on our evolving knowledge of angiosperms.

Regenerative Sanitation Thammarat Kooattat, Peter Emmanuel Cookey, Chongrak Polprasert, 2019-02-15 This book proposes Regenerative Sanitation as the next era of sanitation management and attempts to provide a foundation for the study of sanitation on the premise that sanitation is a complex and dynamic system that comprises of social-ecological, technological and resource systems. The preconception is that sanitation will deliver maximal benefits to society only when there exists a cyclical integration of the three subsystems to enable appropriate linkages between 'technological design' and the 'delivery platform' so as to achieve optimal and sustained sanitation solutions. It also calls for the rethinking of sanitation to change the narrative towards more progressive trajectories such as resource recovery and reuse rather than just amelioration. It explores the contributions to food security, livelihood support, urban regeneration, rural development and even local economies. A new paradigm, theory and ten principles for ensuring practical and effective sanitation solutions and management is presented. In addition is a unique conceptual framework applicable to both developed and developing countries, and to all stages, processes and cycles of delivering sanitation solutions that could critically evaluate, analyse and provide credible, adequate and appropriate sanitation solutions. All of which culminates in a strategic and practical application platform called 'Sanitation 4.0' that advocates for total rejuvenation and comprehensive overhaul with eight key strategic considerations for the implementation. *Regenerative Sanitation: A New Paradigm For Sanitation 4.0* is inter and trans-disciplinary and encourages collaboration between engineers, scientists, technologists, social scientists and others to provide effective and practical user-centred solutions. It includes relevant case studies, examples, exercise and future research recommendations. It is written as both a textbook for researchers and students as well as a practitioners' guide for policymakers and professionals.
